A screenshot of a Windows Command Prompt window titled 'Command Prompt - nslookup'. The window displays the output of several 'nslookup' commands. It starts by setting the default server to 'UnKnown' at 'Address: 192.168.3.128'. Then, it issues a 'server 192.168.3.211' command, which times out. It then sets the default server to '192.168.3.211' and performs a lookup for 'moodle.blr1.cdac.in'. This results in two 'Non-authoritative answer' entries, both pointing to 'Address: 192.168.1.4'. Finally, another 'nslookup' command is issued for 'moodle.blr1.cdac.in' from the same server.

Step-12:- Now add the Stub Zone Go to Forward Lookup ---> Right Click ---> Add Zone ---> Select Stube Zone

Give Zone Name prithviraj

After adding new zone Select Prithviraj ----> Right Click ----> Open New Zone Wizard
Give IP: 192.168.3.211
